

You are invited to participate in this evaluation because we believe in your potential and could drive a quality deliverable. We need a team of talent that could innovate and are very passionate about the technologies.

You will work as a developer to help a Marketing Agency to build a web app for developing marketing campaigns. You will work under a super agile environment within 4 business days as a sprint to deliver the following features:

Requirement:

- (Mandatory Requirement) React app with Node js that enable
 - User to design a form with a drag and drop form builder
 - Component
 - Text input
 - Question (mandatory)
 - min and max length validation (optional)
 - Multiple choice drop down selection
 - Question (mandatory)
 - Add options (mandatory)
 - Table
 - Question (mandatory)
 - Add column into table with text input and multiple choice drop down
 - Bonus: file upload
 - Form display
 - Enable user to create columns and assign the fields into columns
 - The fields are responsive in mobile and desktop devices
 - Condition
 - User can setup the flow of the multiple choice question
 - e.g. When the user select option C -> jump to question 3 directly
 - Actions
 - Save with validation
 - User can preview the form, input and submit the value to the fields with validation
 - data will be posted to server and stored in mySQL

We will be using the below mechanism to evaluate your deliverables

- 40% Functionality
- 40% Code Structure (Reusability, Component based design...Etc)
- 20% Other considerations
 - Upload performance
 - Security
 - Database performance
